# 3D Application

“Lonely T-Rex” game from Google Chrome, in which the player must dodge different kinds of obstacles in order to get as much points as possible.

“Lonely Cube”: 3D game developed in WebGL, inspired in Chrome’s game.

# 3D Models

Multiple 3D models based on simple shapes (cubes and spheres) in order to simplify the detection of collisions.

To make the game “infinite”, a set of obstacles is constantly repeated until the player hits one of them.

Besides the obstacles and player models, there is also a scoreboard in the scene.

# Gameplay

- The player can only move itself in the XX direction
- Some obstacles are still, but others move around
- Throughout the game, these movements become faster and faster (including the forward speed of the player)
- With the mouse, the player can control the x position and restart the game, by pressing the “r” key

- The the cube turns red when the player hits an obstacle
